

SYSTEM AND METHOD FOR SWITCHING VOICE TRAFFIC RELATIONS BETWEEN A
TELEPHONE COMMUNICATION NETWORK AND AN INTERNET

Abstract

A call diversion is set in the telephone communication network by a telephone terminal before an Internet session or by an associated Internet terminal during an Internet session, in such a manner that a connection-setup for a voice traffic relation, set up from a further telephone terminal to the telephone terminal, is diverted to the associated Internet terminal. As a result, Internet terminals associated with telephone terminals and currently conducting an Internet session can be reached.
